Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum
likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the
underlying biological structure was of hazard rates, and the transformation identified this.

A very valuable article Bob, thanks so much! I could go into many problems with other traditional analytics
languages and even new analytics tools, but those are all created by software companies with centralized
control and paid developers.
